ADJUSTMENT OF DOOR POSITION AND DOOR CLOSING SPEED.

Adjustment is made by taking off
floor plate (backside)

1. Adjusting screws (①②③) are loosened.
2. Adjustment of space between door and vertical frame is made by adjusting screws (①③) and tightening lock-nuts of adjusting screws (①③).
3. Adjustment of closing position of door is made by adjusting screw ② after loosening adjusting screw ③.
4. Adjusting screw ③ and its lock-nut are tightened.
5. Adjusting screw ② and its lock-nut are tightened.
6. Adjustment for both closing speed and latching speed is made by turning valves clockwise for slower speed and turning unclockwise for faster speed.
