Colbert Packaging Installs New Eight-Color Printing Press

RMGT press returns faster throughput for pharmaceutical and healthcare manufacturers

Kenosha, Wis. – Colbert Packaging Corporation installs new printing capabilities for pharmaceutical and consumer healthcare manufacturers seeking a U.S. owned and operated supplier for paperboard packaging. Working with RM Machinery, Colbert has completed the implementation of its fourth RMGT printing press. The 1050 LX 8-color UV + IR press installed in Colbert's Elkhart, Indiana, facility expands Colbert's capacity and production speed by running seven- or eight-color work in one pass, whereas in the past this task required two pass-throughs.

Colbert Packaging Corporation is a family-owned business with extensive R&D capabilities and a solid reputation for excellence. Founded in 1959, Colbert Packaging has

grown its repertoire of paperboard packaging solutions into one of the most comprehensive, diverse and inventive portfolios in the industry. Colbert's Kenosha, Wisconsin,

facility produces offset and flexographic printed folding cartons, Pressure-sensitive roll labels and package inserts; the Elkhart, Indiana, operation includes folding carton production and paper tray forming. The RMGT 1050 LX accommodates litho paper from 0.04 mm to paperboard up to 1.0 mm thick. The AGT Combi Chiller monitors and controls ink train temperature for press speeds up to 17,100* sheets per hour.

* High speed package option

RMGT 1050LX-8 + CC + LD + UV + IR

In addition, the press includes an Eltosch UV 4-3-3 dryer for the curing of UV inks, and an IR dryer. This additional component starts the drying process when and if a conventional ink run is required. The UV dryer has four in-press UV lamps that can be relocated from unit to unit to dry trap colors, if needed. A fully

closed-loop color spectrophotometer delivers precise color measurements and adjustments to meet customer specifications without interrupting production.

In keeping with its model of Safe, Smart, and Sustainable paperboard packaging solutions for the pharmaceutical, healthcare and consumer brands markets, this press minimizes waste by reducing the paper, inks and time required for a typical production run. Colbert's press operators see the advantages through its leading-edge monitor system with full video integration, automated quality control and advanced features that reduce downtime. Maintenance time has significantly improved

Serving packaging printing for the pharmaceutical, healthcare and consumer goods industries.

Operations, Bill Snyder. "Building on our technology, speed and capacity enables our employees to work smarter and satisfies customer demand." Working with RMGT's sales organization, RM Machinery, enabled Colbert to leverage its long-standing relationship for a smooth implementation.

Manager Aaron Peters. "While we have always been proud of our reputation for exceptional paperboard packaging, less pass-through handling equates with even greater efficiency and flawless quality."

Mitsubishi and RMGT equipment support efficient automated production of industrial runs, as well as smaller quantities. There are now four RMGT presses operating between Colbert's Kenosha, Wisconsin and Elkhart, Indiana facilities.

to less than 25% of what presses required as little as five years ago.

"This investment in capital equipment aligns with our vision for the future and our commitment to our customers," says Colbert VP of

Other key features of the 1050LX press include:

- Windows-based tablet with pre-installed, customized controls for portable access by operators
 - Removable trays for cleaning
 - Three precision cameras
 - Anti-scratching technology
 - Improved make-ready time
 - Up to 17,100* sheets per hour, with significant waste reduction
- * High speed package option

"The addition of the RMGT press means improved makeready times for our customers," says Colbert's Elkhart facility Production

States RM Machinery Owner and President Rahul Kaushik, "We are happy that our RMGT machines produce high-quality printing for packaging, and we understand the need for flexibility, automation and faster turnaround with a higher Overall Equipment Effectiveness (OEE). This is what all printers need today."

"The new press complements Colbert Packaging's customized solutions," says Colbert President John Lackner. "We've built a great partnership with RM Machinery that supports our growth strategy through capital investment."
