

Company name

Insua Packaging & Flexo, Inc.

Insua Packaging & Flexo, Inc. is a family-owned and managed packaging solutions company located in the southern California/Los Angeles metroplex. Serving a broad variety of folding carton/package printing customers throughout the U.S., they transitioned to the packaging market about 10 years ago to satisfy the demand for high-quality packaging, labels, bags, film, displays, and packaging design.

In March 2017 they introduced a new 6-color 1050LX-6 offset package printing press with an LED-UV curing unit.

A team of 50 veteran employees meet high-end package printing needs

Driving Insua's success, a team of 50 veteran employees help the company meet the demanding expectations of high-end cosmetics and food manufacturing customers. After using the Diamond V3000 press to produce the kind of quality that earned them the business of nationally recognized brands, they only made sense that Insua Packaging preserve the pedigree of its "printing press family" with a new RMGT press.

1050LX with UV enables higher productivity and faster turnarounds

Insua Packaging retired its older Diamond V3000 press in favor of the new RMGT 1050LX, and the new press technology is helping them achieve even greater productivity, faster turnarounds and industry-leading quality.

"The RMGT 10 is quick and efficient, with some new features that make start-up, make-ready and operation second to none."

Insua Packaging's RMGT 10 press features a newly developed nonstop feeder and a delivery shutter that effectively accommodate the 18 to 30 point SBS stock the company frequently prints on for its industry-leading folding cartons. Another press feature cited is the Simulchanger simultaneous plate cylinder repositioning system, which dramatically cuts plate changing time, achieving the faster turnarounds crucial for short-run projects.

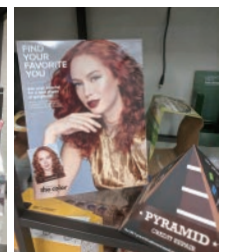

Albert Insua says, "The UV anilox coater really helps deliver 'stand-out' quality in our printed product in addition to enabling faster drying and quick turnarounds." As a result of this and the other production advantages the press delivers, Mr. Insua says that business has grown significantly since installation of this "remarkable press."

Promoting customer sales through both short- and long-run printing

The company operates out of 60,000 ft² of production space with warehousing in three buildings in Sun Valley, CA, where they routinely prints anywhere from 10,000 up to tens of thousands of folding cartons that make up its portfolio of UV-coated, sharp-looking printed cosmetics, food and related packaging for dramatic "stand-out-on-the-shelf" impact.

Using UV printing to produce high-end cosmetics packages

Design and production of stand-out-on-the shelf packages

To help roll out the new press last year, Insua Packaging welcomed family friend Yasiel Puig, the superstar right fielder for the 2017 National League champion Los Angeles Dodgers baseball team ...and no stranger to record-breaking success. "We're pretty sure it was the first time in American history that any printing company had a baseball player with Yasiel's star status witness a printing press's first run. We weren't planning to break any records, but it was a great way to celebrate the day! We wanted to get the new press up and running as soon as possible, because we always have lots of jobs to run."
